Good Afternoon,

I just wanted to share this in the event you missed it!

We are excited to introduce PTZ Boxed Zoom, a faster and more intuitive way to focus your camera on a specific area of interest.

With Boxed Zoom, simply draw a box around the scene you want to view. The camera will automatically pan, tilt, and zoom so the selected area fills the video frame, helping you quickly focus on the details that matter.

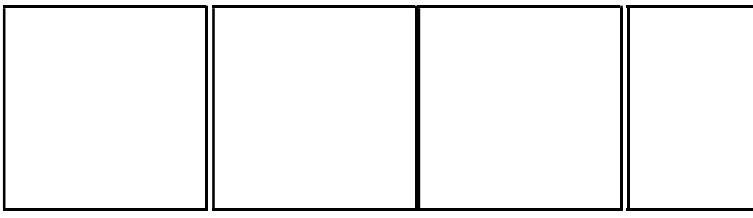

To use this feature:

1. Open a live PTZ camera view.
2. Right-click and drag to draw a box around the area you want to inspect.
3. Release the cursor and the camera will adjust to your selection.

This feature is designed to make live video monitoring more efficient, especially when you need to quickly examine a person, vehicle, or other activity within the camera's view.

Stay Safe,

Michael Pearman
