Looks Like Freedom Hall Civic Center will be the best spot. They already have 300 foot Ethernet cables and access to a roof. Very little line of sight issues and centrally located in the city.

Mike if there is a building that is taller that you have access to that we could get over the ridge may be a better experience for the fly day.

on that front.

One thing I did want to check — do you all have a proposed launch location in mind? If not, I was looking at the PD as a potential option. It could work, but I do want to flag that the hills behind the building would limit our coverage to only one side of the city, as flying beyond that ridgeline would break Visual Line of Sight (VLOS). Worth keeping in mind as we finalize the location.

Please feel free to reach out with any questions. Looking forward to working with you all.

Best regards,
Luis De La Sotta

Hey Chief,

Looking forward to seeing y'all Friday. I wanted to send over some information on what we'll need to ensure a successful fly-day.

- **Building:** A tall, flat rooftop for our pilot and drone to launch from - ideally higher than surrounding buildings and tree cover. (PD will work - we just will not be flying over the hill behind the building).
- **Power & Connectivity:** Access to power (110 plug) and ethernet (hardwired internet) on the roof so the pilot can charge batteries and connect the drone.
- **Viewing Room:** The room we fly from can be separate from the rooftop, but if possible, a space with a large screen would be ideal so everyone can view the live flight.
- **URL:** Some departments block the website we use to fly from because it streams video. The URL we are going to use is: demo5.aerodome.com so if we can get that white-listed that would be great!
- **Prep:** Luis will be onsite Thursday afternoon to prepare for the demo. I will let him coordinate with y'all regarding that.

Please let me know if you or the team have any questions.

Best,
Ethan
