Subject: FW: Questions regarding the downtown camera damage

Good morning...
We had an LPR that we believe was struck by a semi truck and spun around to cause the lpr to be aimed into a private residence bedroom window. I dont think the device took any photos but we want to be able to respond to the lady who posted a video about it. Can you provide any answers to the Chiefs question? It is located on [redacted].

Mike, since you are with the technical experts this week can you ask regarding this LPR if the company can determine the last time it recorded anything, to include when it was damaged and turned. The other question is would there be any other cameras that would have captured the damage occurring. If the company has any documentation showing when that thing last recorded that would maybe help some of the public's concerns about this incident.
